JOB MARKET PAPER	Fiscal Policy and Sentiments in a Monetary Union <i>Abstract:</i> Members of a monetary union have limited control over monetary policy. This can elevate the role of fiscal policy as the primary macroeconomic tool against country-specific shocks. In this paper, I argue that fiscal policy is highly effective at stimulating output in countries via its impact on consumer sentiments. Using data for the European Economic and Monetary union, I provide evidence that the sentiments channel for fiscal policy is strongly present in peripheral European countries but absent in core countries. The impact of fiscal policy on consumer sentiments also make fiscal consolidation more costly in terms of output in peripheral countries. I validate my empirical findings using a New Keynesian model of currency union where agents form expectations based on non-fundamental factors (animal spirits) correlated with fiscal policy. I show the existence of a stronger response of output to fiscal policy through the latter's impact on consumer sentiments.
